Questionnaire on Fertility Treatment Abroad to be completed by Treating Specialist

Policy number: _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _

Name: _____

Date of birth: _ _ - _ _ - _ _ _ _ _ _

Dear Sir or Madam,

Madam has the right to reimbursement for IVF/ICSI treatment abroad. In the Netherlands, this treatment is conducted in a licensed institution. Therefore, the treatment is assessed on a number of criteria. In other countries, the same criteria are not necessarily applied. It will be assessed based on the following questionnaire whether the insured person is eligible for reimbursement.

1. IVF ICSI KI(D) IUI Other

Indication/Explanation:

If special treatments take place along with the IVF/ICSI , please mark them with a cross:

MESA PESA TESE GIFT PGD Assisted hatching Ovum donation

2. Age of the insured person

You may be eligible for IVF/ICSI abroad if your age is not over 42 years.

If you are aged 43 or over, you no longer have the right to reimbursement for IVF/ICSI and other fertility-related treatment.

3. An insured person has the right to three attempts in total.

What number of valid attempt is this IVF/ICSI treatment?

Date of first attempt at IVF/ICSI: _ _ - _ _ - _ _ _ _ _ _

Result: _____

Date of second attempt at IVF/ICSI: _ _ - _ _ - _ _ _ _ _ _

Result: _____

Date of third attempt at IVF/ICSI: _ _ - _ _ - _ _ _ _ _ _

Result: _____

Explanation:

Both previous treatments in the Netherlands and previous treatments abroad count as attempts. A treatment counts as an attempt if upon puncture at least one ripe ovum is obtained. An interrupted treatment during the hormone treatment phase therefore does not count as an attempt; an obtained ovum with which no fertilisation was possible in the laboratory does indeed count as an attempt.

After a continuing pregnancy, whether or not it arose via IVF/ICSI, there is again a right to three attempts for a new desire for pregnancy. A continuing pregnancy is defined as a pregnancy with at least one living embryo, counted at least 10 weeks from the date of follicle puncture, or 12 weeks after the first day of the last menstruation. After a change of partner too, there is again the right to an IVF/ICSI treatment process of three attempts, if there is joint infertility.

Will the treatment occur according to Western medical standards? How many embryos will be replaced?

The treatment will occur according to Western medical standards

Number of embryos?

One embryo

Two embryos

Three embryos

Explanation:

A condition to be considered for reimbursement abroad is that the treatment is conducted according to Western medical standards.

Replacement of three or more embryos, as happens in some countries, is not eligible for reimbursement.

Care provider (where the treatment takes place):

Name of treating physician:

Signature/stamp of treating physician:

Date:

Name of IVF clinic:

Address:

Town/city:

Country:

We will of course treat this information as highly confidential and it will only be used in the assessment by the medical advisor.
